

Streamline Fax Messaging with FaxOut™

Unbeatable Outlook Integration

FaxOut™ is a client suite of end-user tools and applets that is now included with the Email Gateways for the NET SatisFAXtion Small Business and Enterprise Editions.

With FaxOut, users can choose cover sheet options, schedule delivery, and select notification preferences -- among other things -- and save their settings for quick customization. Print any document to the FaxOut print driver for instant addressing and delivery while yielding significant business application integration.

For example, when printed to the "FaxOut" print driver, any document containing a fax number can be instantly addressed and delivered as a fax. NET SatisFAXtion eliminates the extra steps other fax software packages require: manually looking-up fax addressing information in contact address books. A broad range of diverse business and vertical applications are supported ensuring seamless fax integration that can be easily mastered by the most non-technical of users.

FaxOut™ Features

Enables Universal Messaging with Fax and Email

- Fax and email messages are created and sent in the same easy step.
- Integrates directly with Outlook's contact manager allowing users to easily send faxes to any fax number stored in Outlook.
- Automatically formats fax addresses.
- Send to mixed address types (email and fax).

Annotate and Preview Before Sending

- Review documents as they appear converted to a fax before they are sent.
- Save time by providing the user with 100% confidence that the documents they are sending will appear exactly as the sender intended.

Enables Simple Print-to-Fax Access

- Quick click access for faxing and add-ins supplied for popular applications.
- Print-to-Fax from within any Windows-based application.
- Allows you to fax while viewing the document.

Combine Documents from Various Applications

- Streamline your communications by combining charts created in Excel with content created in Microsoft Word.

Preserve Delivery Confidence of Fax Machine

- Gives end users the same delivery confidence as if they were standing at the department fax machine watching the progress of their fax.
- Users know instantly the status of their sent faxes.
- Users receive a confirmation email each time a fax is sent.
- Includes real-time monitor tool that lets workstation users view the actual progress of their fax messages from their desktops.
- Receive email notifications when faxes are delivered.
